PROFESSIONAL SUMMARY

Software Architect heavily focused on high-level system design and engineering robust solutions. Rather than getting bogged down in routine syntax, I heavily leverage AI-Assisted Engineering to accelerate the development lifecycle. This allows me to focus entirely on Big Picture architecture: Decoupled Systems, Hybrid Algorithms, WebAssembly integrations, and Sovereign Offline-First databases. I possess a proven track record of managing the entire Software Development Life Cycle (SDLC) to transform extremely complex constraints into highly scalable, enterprise-grade bootstrapped products.

PROFESSIONAL EXPERIENCE

Independent Systems Architect & Technical Founder 2021 - Present

Bootstrapped Enterprise Products

- Architected and deployed 4 massive enterprise systems (SaaS, POS, Metaheuristic Scheduling, WASM Converters) from scratch to production using advanced AI-Assisted Development techniques.
- Driven strategic System Design decisions, such as utilizing WebAssembly for absolute privacy (Zero-Upload) and SQLite/Drift for seamless Offline-First business continuity.
- Enforced strict Clean Architecture principles to completely decouple UI from complex business logic, enabling massive scalability and maintainability.
- Managed the end-to-end SDLC: from analyzing highly complex NP-Hard problems, designing hybrid algorithms, to final deployment and engineering SEO-driven Monetization Funnels.

KEY TECHNICAL PROJECTS

NextVendors (SaaS Platform) Python, FastAPI, React, Docker

TECHNICAL SKILLS

Languages & Frameworks

Python / FastAPI
React / Next.js Flutter / Dart
TypeScript Node.js
Tailwind CSS

Systems & Architecture

System Design
Clean Architecture
Offline-First (Drift/SQLite)
Docker / Nginx
PostgreSQL / Alembic
WebAssembly / Web Workers

AI & Algorithms

AI-Assisted Engineering
Genetic Algorithms
Google OR-Tools (CP-SAT)
Prompt Engineering

KEY METRICS

Bootstrapped Products	4+
Architectural Focus	100%
Years Experience	4+

LANGUAGES

Arabic	Native
--------	--------

A highly scalable multi-vendor e-commerce platform built on a Decoupled Architecture. Features a custom-engineered, independent payment engine designed to bypass local gateway restrictions and geographical constraints.

English

Professional

Cachear Enterprise POS Flutter, BLoC, Clean Architecture

A massive Offline-First retail enterprise system featuring Sandboxed Workspaces via QR login, an omnidirectional smart barcode scanning engine, full thermal printer support, automated PDF invoicing via WhatsApp, and complex financial reconciliation triggers.

Privacy-First Image Conversion Engine Next.js, WebAssembly, PWA

A 100% client-side HEIC-to-JPG conversion platform utilizing Web Workers. Ensures absolute document privacy (Zero-Upload) for government portal users, equipped with full SEO compliance silos and an advanced AdSense monetization funnel.

University Scheduling Engine (AI) Google OR-Tools, Genetic Algorithms

An intelligent hybrid scheduling system integrating Genetic Algorithms and Constraint Programming (Google OR-Tools/CP-SAT) to automatically resolve complex NP-Hard scheduling conflicts, perfectly balancing hard capacity limits and soft preferences.
